

# initramfs

## Fehlermeldung

```
W: initramfs-tools configuration sets RESUME=UUID=xxxxxx-ssss-eeee-rrrr-tttttttt
W: but no matching swap device is available.
I: The initramfs will attempt to resume from /dev/sdc2
I: (UUID=aaaaaaaa-bbbb-ssss-rrrr-ggggggggg)
I: Set the RESUME variable to override this.
```

Wenn so eine Meldung auftritt dann kann man das beheben indem man die Variable RESUME überschreibt in der Datei **/etc/initramfs-tools/conf.d/resume**

```
#RESUME=UUID=xxxxxx-ssss-eeee-rrrr-tttttttt
RESUME=none
```
